^{*} Surcharge for nonstandard colours – 15 %.

WARNING! In the production of pleated insect screens, we use 2 types of sliding profiles for opening and closing the insect screen. As standard, the narrow sliding profile is used for insect screens narrower than 3000 mm and the wide sliding profile for insect screens wider than 3000 mm. If you want to use a different profile than it results from the above rule, enter this information in the "comments".

^{**} Total dimensions of insect screen including guide channels.

^{***} **ATTENTION!** In pleated mosquito nets mounted under the external roller shutter (with a guide with an off-set), side guides of the mosquito net are not used. The handles, into which the mosquito net is cliped, are screwed directly to the guides of the external roller shutter.
