Total dimensions of screen**		quantity [pcs]	colour of aluminium profiles							side of mounting (look from the outside)		bottom channel			*** mounting under the external roller shutter	notes
width [mm]	height [mm]		white RAL 9016	brown RAL 8014	anthracite RAL 7016	* golden oak (surcharge)	* walnut (surcharge)	* winchester (surcharge)	* painting RAL (surcharge)	left	right	glued	screwed	slanting		

\* Surcharge for nonstandard colours – 15 %.

\*\* Total dimensions of insect screen including guide channels.

**WARNING!** In the production of pleated insect screens, we use 2 types of sliding profiles for opening and closing the insect screen. As standard, the narrow sliding profile is used for insect screens narrower than 3000 mm and the wide sliding profile for insect screens wider than 3000 mm. If you want to use a different profile than it results from the above rule, enter this information in the "comments".

\*\*\* **ATTENTION!** In pleated mosquito nets mounted under the external roller shutter (with a guide with an off-set), side guides of the mosquito net are not used. The handles, into which the mosquito net is clipped, are screwed directly to the guides of the external roller shutter.
